ABSTRACT:

The seed-coating preparation is based on hydrolysis products of polyacrylonitrile or

acrylonitrile copolymers, is permeable to water and air, and contains nutrients and microelements which promote seed germination. Thus, hydrolyzates of acrylonitrile copolymer fibers (such as Anilana acrylic fibers) are mixed with 10-200% by weight of brown coal ash which may contain Ca, Mg, or Fe salts and microelements such as Cu, Mn, Co or V.
